

Modification that opens up the TX outside of the ham bands.

I have NOT done this myself. Here is the information from the dealer:

Today I finally got information from the factory for making the X108 transmit outside the ham bands. I assume it will transmit 0.5 - 30 MHz.

Proceed at your own risk. I haven't tried this yet, but W4YN is going to test it out and let me know what he finds in the way of spurs, etc.

Modification requires removal of R76, located on top of the top board, at the very front.

Remove the front 4 screws, the knobs etc should not need to be removed.

Remove the four back screws and the back panel.

Place the radio on its top and remove all the bottom screws.

The chassis should then slide out the front of the case

Place a piece of plastic wrap over the heat sink to avoid a mess

Turn the radio over and look for R76. it is a tiny thing (and maybe could be removed

with an x-acto knife?)

See picture below.

On your own risk!!!

LB5VA, Stig
